Subject: Job advert Biochemist

The Department of Molecular Medicine at the Max Planck Institute of Biochemistry is seeking a Biochemist at the pre- as well as postdoctoral level. The successful candidates for this position would take over an ambitious project where reconstituted adhesion complexes are used to understand the earliest molecular events of cell adhesion to integrin substrates.

The candidates would join a successful and well-equipped laboratory with world-wide recognition in the field of adhesion biology. Besides an interesting and disease-relevant project, we offer the opportunity to connect to internationally renowned scientists.

The successful candidates will hold a Master for the pre-doctoral position, and a PhD degree for the postdoctoral position with a strong background in biochemistry, with in depth experience in
- Heterologous protein expression und purification,
- Characterization of proteins,
- Analysis of protein interactions (e.g. surface plasmon resonance, isothermal titration calorimetry, analytical ultracentrifugation, dynamic light scattering).

Please send your application including references to Prof. Dr. Reinhard Fässler (Faessler@biochem.mpg.de). Salary will be according to German public servant salary scale (TVÖD).
