

The laboratory of dendritic cell biology at CIML is recruiting a Ph. D student to work on autophagy and proteasome inhibitors resistance in multiple myeloma

The Centre d' Immunologie de Marseille-Luminy is a world-class immunology institute with a tradition of highly innovative research. It provides an exceptional international research environment, with a renowned graduate program. The CIML is currently composed of 200 members in 16 research groups and 6 technological core facilities. The CIML is located campus in the Calanques national park in the south of France and is affiliated with Inserm, CNRS and Aix-Marseille-University.

The laboratory of dendritic cell biology seeks to recruit a talented individual in the field of cell biology, autophagy applied to immuno-oncology. Our research project focus on membrane traffic regulation and stress responses in multiple myeloma. The position is funded for 3 years by the ICI Institute of Aix-Marseille University.
