

Collagen
Gordon Research Conference

Physiological and Disease Relevance and the Underlying Molecular Properties of Collagens

July 9 - 14, 2023

Chair

Taina Pihlajaniemi

Vice Chair

Douglas B. Gould

Colby-Sawyer College

541 Main Street
New London, NH, United States

We have an outstanding program for the Collagen GRC, July 9-14, 2023, at Colby-Sawyer College, New Hampshire, USA, and this will be further complemented by **18 abstract-based speakers in early June**. On behalf of myself, the GRC Chair, and Doug Gould, the Vice Chair, we **encourage your trainees, post-docs and colleagues to attend the 2023 Collagen GRC**. Early career researchers have always been a key part of the Conference, sparking new ideas and fresh directions of investigation. We will partially cover the registration costs of those who were selected to present a talk based on their abstract.

We would also like to encourage those that have not yet **registered to the conference** to do so as soon as possible to secure your desired room on the site.

We would also like to call your attention to the **Collagen Gordon Research Seminar (GRS)** which is taking place on July 8-9, 2023, right before the Collagen Gordon Research Conference. The GRS is chaired by Delfien Syx (Ghent University, Belgium) and Jonathan Roth (Rutgers University, USA). The target audience of the GRS are graduate students and post-docs, as well as researchers with similar experience. Hence, the Collagen GRS is a great opportunity for trainees to engage in scientific discussion with peers in an amicable atmosphere. The Collagen GRS has been running since 2011 and has had positive reviews from attendees every time.

We are very enthusiastic about the Collagen GRC and GRS. You can find further information in the websites.

GRC website: <https://www.grc.org/collagen-conference/2023/>

GRS website: <https://www.grc.org/collagen-grs-conference/2023/>

Many thanks and we are looking forward to meeting you at the GRC this July.

All the best,

Taina Pihlajaniemi and Doug Gould
